

Product Specifications

Custom Oligo Synthesis, antisense oligos, RNA oligos, chimeric oligos, Fluorescent dyes, Affinity Ligands, Spacers & Linkers, Duplex Stabilizers, Minor bases, labeled oligos, Molecular Beacons, siRNA, phosphonates Locked Nucleic Acids (LNA); 2'-5' linked Oligos

Oligo Modifications

For research use only. Not for use in diagnostic procedures for clinical purposes.

Convertible dU (O4 Triazolyl dU)

Category	Convertible Bases
Modification Code	O4-Tri-dU
Reference Catalog Number	26-6608
5 Prime	Y
3 Prime	Y
Internal	Y
Molecular Weight(mw)	289.18

Convertible dU & dC (O4 Triazolyl dU) monomer can be used to introduce a variety of modifications at the convertible position, including N, O and S modifications.

The triazolyl pyrimidine convertible nucleosides allow oligonucleotides to be produced containing: 4-thio derivatives for cross linking reactions; 4-amino derivatives for DNA structural research; O4-alkyl derivatives for carcinogenesis studies; and offer the potential for the introduction of ¹³C, ¹⁵N and ¹⁷O labels for NMR experiments.
