## TECHNICAL RESEARCH REPORT

Additional information on Chromovert® Technology is available at this link:  
<https://link.springer.com/article/10.1007/s10529-021-03101-5>

---

Research materials, including fluorogenic probes and pChromo-Plasmids™ comprising Chromo-Tags™, are licensed for research purposes only. An individual license for commercial use may be obtained by contacting Secondcell Bio, LLC at [cells@secondcellbio.com](mailto:cells@secondcellbio.com).

All plasmids are supplied as 10 µg aliquots provided in 10 mM Tris-HCl, 1mM EDTA, pH 8.0 at a concentration of 0.5 µg/µL. The concentration reported in the table below is the exact measure recorded by the Nanodrop (+/- 10% is the standard deviation of the Nanodrop quantification method).

Note: Partial sequencing was used to confirm the identify of all plasmid preparations prior to shipping. All plasmids were prepared from single colonies obtained from glycerol stocks established using fully sequence-confirmed plasmids.

Plasmid Name	CAT #	Conc. (ng/mL)	OD 260/280	OD260/230
pChromo-NeoO	40-2201NO-01	539.9	1.94	2.18
pChromo-NeoA	40-2201NA-01	526.0	1.95	2.19

Additional information on Chromo-Tags™ and protocols to operate Chromovert® Technology are available at: <https://link.springer.com/article/10.1007/s10529-021-03101-5>

Research materials, including fluorogenic probes and pChromo-Plasmids™ comprising Chromo-Tags™, are licensed for research purposes only. An individual license for commercial use may be obtained by contacting Secondcell Bio, LLC at [cells@secondcellbio.com](mailto:cells@secondcellbio.com).

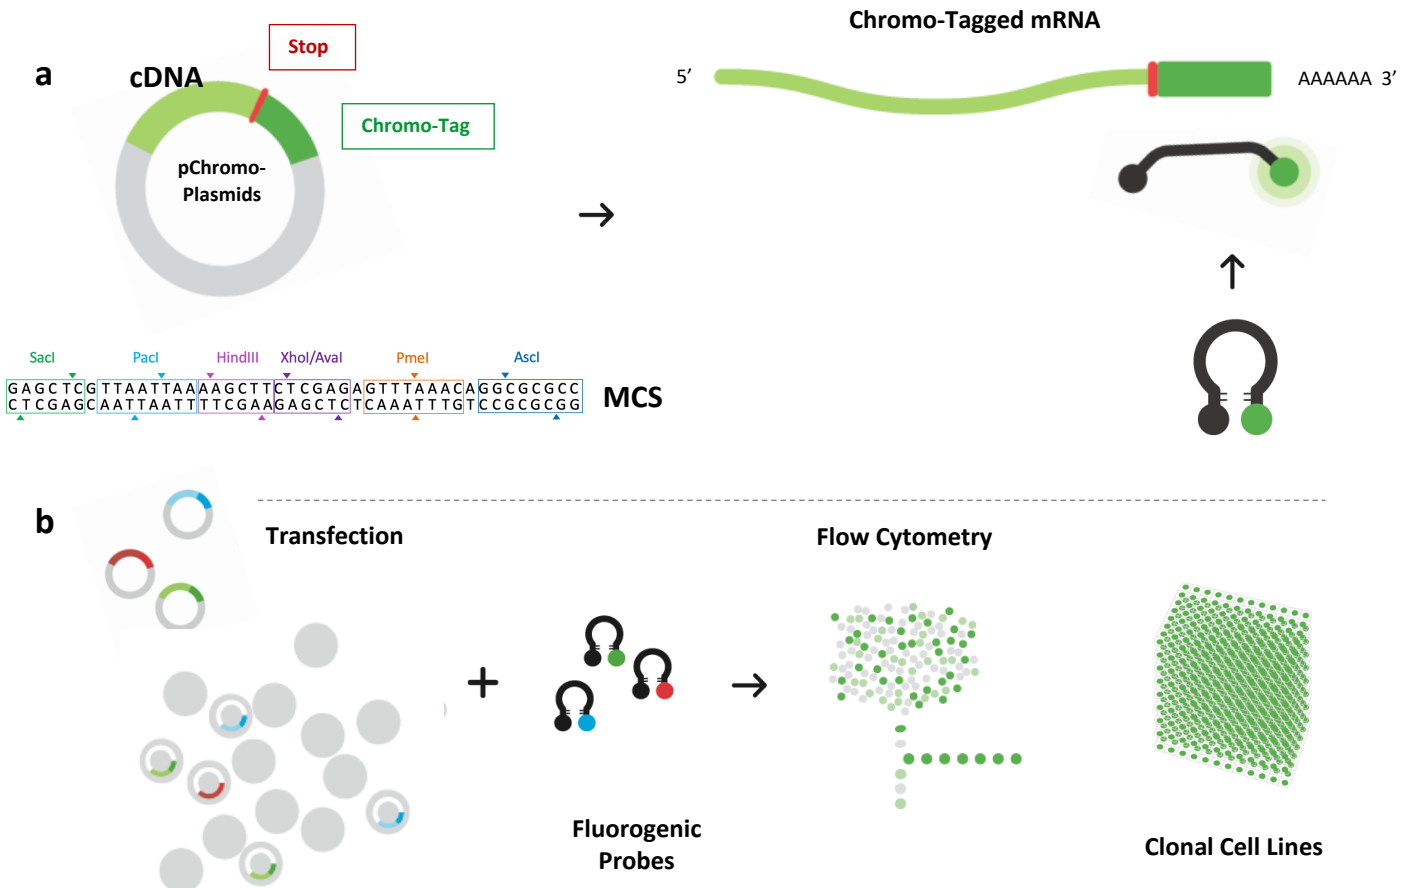

**Chromovert® Technology** is a new research tool for rapid creation of stable cell lines. The technology utilizes fluorogenic oligonucleotide signaling probes and flow cytometry to detect and isolate individual living cells expressing one or more genes.

For more information or to obtain pChromo-Plasmids™ or signaling probes from our preferred eCommerce partner at Gene Link, Inc. please go to <http://www.secondcellbio.com/>.

### Fluorogenic Oligonucleotide Probes

### Process

**a)** cDNAs are subcloned for expression of mRNAs comprising 3' untranslated plasmid-encoded Chromo-Tag™ sequences for detection using fluorogenic oligonucleotide signaling probes. Protein expression products remain untagged. **b)** To create cell lines, one or more Chromo-Tagged cDNAs are transfected into cells, the transfected cells are exposed to differentially-labeled signaling probes and individual positive cells are isolated using flow cytometry. Downstream testing is used to select final cell lines.

Research materials, including fluorogenic probes and pChromo-Plasmids™ comprising Chromo-Tags™, are licensed for research purposes only. An individual license for commercial use may be obtained by contacting Secondcell Bio, LLC at [cells@secondcellbio.com](mailto:cells@secondcellbio.com).
