

Product Specification Summary

DNA & RNA Precipitation Solutions

| | |
|----------------|-----------------------------------|
| Catalog Number | 40-5112-10 |
| Product Name | Glycogen Solution 10 mg/mL; 10 mL |
| Size | 10 mL |
| Description | Glycogen Solution 10 mg/mL; 10 mL |
| Component/Note | 10mg/mL |

Effective DNA and RNA precipitation with the use of monovalent salts and ethanol or isopropanol is dependent on its concentration. DNA and specifically RNA precipitation at a concentration of less than 50 ng/mL is usually not quantitative and the pellet is not clearly visible leading to unreliable recovery.

Addition of glycogen or linear acrylamide as a carrier/coprecipitant aids in quantitative recovery and specifically clear visibility of the pellet. Glycogen does not interfere with spectrophotometric readings, electrophoresis, and most molecular biology enzymatic applications including PCR.

Usage: 1 μ L (10 μ g) of 10mg/mL glycogen solution is adequate for 500 μ L DNA or RNA solution.

Glycogen origin: Glycogen is a highly purified polysaccharide derived from oysters.

Specification: Molecular biology grade. Glycogen solution supplied is validated DNase and RNase free. Glycogen solution may contain remnant nucleic acids.
