

# Product Specification Summary

## Fluorescent Molecular Probes

|                |  |
|----------------|--|
| Catalog Number | 26-8121-02   |
| Product Name   | Fluorescent Probe, 5'-Fam/3'-Quencher, 25 nmol purified yield          |
| Size           | 25 nmols   |
| Description    | Fluorophore-Quencher Probe, 5'-Fam/3'-Quencher, 25 nmol purified yield |
| Component/Note | Fluorescent Probe, 5'-Fam/3'-Quencher, 25 nmol purified yield          |

Fluorescent dyes are routinely used in oligonucleotide-based research as detection labels for primers and probes. Dual-labeled probes incorporating various matched dye and quencher combinations are often indispensable for quantitative experiments. Fluorescence-based detection offers a safe and sensitive method for both qualitative and quantitative detection of target sequences in vitro and in vivo. The elegant design of the newer probes has led to an exponential increase in the use of molecular probes, furthering new developments.

Single-dye-labeled oligos are effective as primers for sequencing, AFLP and microsatellite fragment analysis, and single-dye-labeled probes for fluorescent in situ hybridization (FISH) and oligonucleotide ligation assay (OLA) applications. Dual-labeled probes incorporating various matched dye and quencher combinations are often indispensable for quantitative experiments. Fluorescence-based detection offers a safe and sensitive method for both qualitative and quantitative detection of target sequences in vitro and in vivo. The elegant design of the newer probes has led to an exponential increase in the use of molecular probes, furthering new developments. Gene Link offers synthesis of all different forms of molecular probes and knowledgeable technical service in the design of novel probes, including chimerics
