

Product Specifications

Custom Oligo Synthesis, antisense oligos, RNA oligos, chimeric oligos, Fluorescent dyes, Affinity Ligands, Spacers & Linkers, Duplex Stabilizers, Minor bases, labeled oligos, Molecular Beacons, siRNA, phosphonates Locked Nucleic Acids (LNA); 2'-5' linked Oligos

Oligo Modifications

For research use only. Not for use in diagnostic procedures for clinical purposes.

ddT-5'

| | |
|--------------------------|--------------|
| Category | End Blockers |
| Modification Code | ddT-5 |
| Reference Catalog Number | 26-6334 |
| 5 Prime | Y |
| 3 Prime | N |
| Internal | N |
| Molecular Weight(mw) | 288.19 |

Dideoxythymidine (ddT) is a dideoxyribonucleoside that can only be used to block the 5' end. Use ddC-3' or Spacer C3 to block the 3' end from polymerase extension. ddT is a synthetic analog of deoxythymidine, in ddT, both the 2'- and 3'-positions of the ribose have a hydrogen (-H) group substituted for the -OH group, whereas in dT, only the 2'-position is so substituted. ddT is added to the 5'-end of an oligo via 5'-to-5' synthesis, using a 2',3' -ddT, 5' phosphoramidite. Purification must be by PAGE purification, since such an oligo will not have a trityl group that is required for RPC purification.

ddC-3' should be used as a 3'-end blocking moiety (see ddC technical sheet).
